

SGI-008 Basement Window System

The SGI-008 Basement Window System is designed primarily for new home construction, but is also available for renovation/replacement applications. This system's versatility allows us to service fabricators, builders and renovators. This basement window system is also designed to accommodate the Egress Life Safety Code requirement and to reach the highest performance in air and water tightness. SGI-008 is strong, yet versatile. It is beautiful, yet performs above the required standard. It is another of SKYREACH's creative and reliable products.

Features & Benefits

- 8" Frame depth, with 1" & 2" frame extension – ideal for new home construction, pour-in-place.
- Unique frame design to allow concrete wall to bond to the frame.
- Also available in 2-7/8" frame depth for renovation/replacement projects.
- 3/4" IG units in Low-E Argon for energy conservation.
- Both sashes are fully removable with full perimeter weather strip.
- Center-mounted locking system.
- Replaceable sill track.
- Sloped sill for proper drainage.
- Galvanized steel reinforcement for structural rigidity and strength.
- Available in Fully Assembled with wood bracer (FA) and Knock-Down (KD) formats.
- Standard stock sizes: 30x12, 30x16, 30x20, 30x24, 36x24, 48x24, etc.
