## What's Growing in Cucamonga?

SKYREACH L&S Extrusions (USA) Corp. is proud to announce the growth of its USA Headquarters in California. As preparations are made to move into a new 92,000 square foot warehousing, fabrication and distribution facility in Rancho Cucamonga, the metamorphosis of the team and infrastructure is taking shape.

After dedicating time to understanding the market and product preferences, General Manager Gavin Taylor is excited to offer a series of product lines—in particular, window and patio door systems. “We’re in a position to introduce and supply products that have been specifically designed to meet the habits, tastes and requirements of the Western USA market”, says Gavin. “We’ll continue to build on a strong foundation and expand our efforts within the Fabricator and Window and Door Dealer channel across the Western USA.”

With plans to explore and expand into the Building Products Distribution and Dealer Channel, SKYREACH L&S Extrusions (USA) Corp. is prepared to expand its product offering to other markets, including Fencing; Non-Fenestration Custom Profiles; Moulding and Trim; and Fiber Casement Siding and Board. Please visit the Skyreach website for the full story.

## What's Growing in Cucamonga? (continued)

Visit [www.skyreachls.com](http://www.skyreachls.com) to learn more about the California Headquarters, or contact Gavin Taylor, General Manager, California Headquarters: [gtaylor@skyreachls.com](mailto:gtaylor@skyreachls.com).

SKYREACH L&S Extrusions Corp. was reinvented from its precursor in 2011 when a Hong Kong listed company, LIANSU Holding – Stock Code 2128, invested heavily to establish manufacturing facilities in Canada, USA and China. The first North American manufacturing facility and the Canadian headquarters is located in Vaughan, ON, Canada. SKYREACH's first warehouse and fabrication facility in the USA was established in Orange, CA. As a matter of course, warehouse and manufacturing operations have been set up in the Chicago, IL area of the midwest to further meet increasing demand.
